Mean 33.108;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Variance 140.762; scale 0.235

This potassium channel sequence is encoded by the DmORFI gene from Drosophila melanogaster, and has 2 pore-forming domains between 4 hydrophobic transmembrane helix domains. Each pore-forming H5 domains with a VF-G dipeptide motif required for potassium septectivity. The protein contains a single N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DMORF! potassium channel protein.

DMORF!; potassium channel; fruitfly; pore-forming domain, transmembrane helix; N-glycosylation site; potassium-agonist; potassium-antagonist; drug screening; insecticide; cardiac disorder.
                    colon cancer metastasis.
Claim 8; Fig 4; 60pp; English.
Novel polypeptides (W06545-53) are encoded by CDNA clones (see also 745880-92) corresponding to 13 human colon specific genes, designated CSG1, CSG2, etc., that are primarily expressed in tissues derived from the colon. Recombinant CSG polypeptides can be produced in transformed host cells. They are useful diagnostic markers for colon cancer and for colon cancer metastasis and can also be used to screen for (ant)agnostic therapeutic or diagnostic value. Antibodies raised against the colon specific polypeptides may be used to target colon cancer cells or as part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
  which, in non-colon tissue samples, can be used as indication of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as probes to detect expression of the corresponding human genes, e.g. in diagnostic assays for detecting micrometastases of colon cancer. Recombinant cells containing the polynuclectides can be used to produce the proteins, in order that antibodies can be raised and used in further screening or diagnostics. Sequence 135 AA;

Claim 3: Columns 47-52; 46pp; English.

The present sequence is that of a human mitochondrial isoleucyl-tRNA synthetase. The cDNA encoding for the mitochondrial isoleucyl-tRNA synthetase was isolated from a human T-cell cDNA library. The cDNA can be expressed using expression vectors to produce the corresponding recombinant protein. The protein can be used in assays to test substances known to inhibit the isoleucyl-tRNA synthetase or other tRNA synthetase or pathogenic organisms. Also, expression of the isoleucyl-tRNA synthetase in a tester strain can be useful for testing substances which are capable of inhibiting its activity.
                                                                                                                                                                                                                                                                                                       FFAFTVCSTVGYGNISPTT-FAGRMIMIAY-SVIGIPVNGILFAGL-GEYFG-RTFEAIY 152

       The protein is predicted to
asparagine-linked glycosylation site. The protein is predicted to span the membrane 4 times, with N- and C-termini within the cell, and the glycosylation site and H2 domains on the cell exterior, allowing permeation of the membrane by the pore-forming domains from the outside, a requirement for functional potassium channel formation. The protein may be expressed in a heterologous host cell to assay substances to determine effects on cell growth. Potassium-agonists of potassium-antagonists identified by this method may be used as insecticides or in therapy of cardiac

Escherichia coli plasmid used for growth of yellow tail fish comprises plasmid ps14001 derived from ampicillin resistant gene obtd. from pituitary tissue of yellow tail fish;

i Fig 4; 7pp; Japanese.

The E.coli plasmid comprises plasmid ps14001 derived from ampicillin resistant gene contg. E.coli plasmid ps322 and yellow tail pre-growth hormone having cyclic double chain plasmid pyGH1 of 3851 Bp, and yellow tail growth hormone of 185 and 187 (p81244) Ah sequences contd. in pyGH1. The plasmids were introduced into E.coli host cell DH1. The plasmids are used for cultivation of young yellow tail, by E.coli and Bacillus subtillis having recombinant plasmid for yellow tail pre-growth hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This polypeptide comprises gentian flavonoid 3' hydroxylase (F3'H). Its amino acid sequence was deduced from a cDNA clone (see T94664) isolated from a petal cDNA library. F3'H acts on dihydrokaempferol to produce dihydroquercetin and on naringenin to produce eriodictyol. Isolated F3'H nucleic acids (see T94655-65) can be used to provide genefic constructs capable of modulating the hydroxylation of flavonoid compounds in a plant, e.g. by de novo expression, over-expression, antisense inhibitton and ribozyme activity. Modulation of F3'H is useful for the manipulation of pigmentation (flavonoids contribute to a range of colours from yellow to red to blue) in plants, especially flowering plants such as petunia, carnation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chrysanthemum, rose, snapdragon, tobacco, cornflower, pelargonium, lisianthus, gerbera, apple, iris, lily, african violet and morning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel flavonoid 3'-hydroxylase(s) from flowering plants - and corresponding DNA, used in the manipulation of pigmentation in

This is the malignant and other cell growth abnormalities control malignant and other cell growth abnormalities.

Claim 2; Pages S8-61; 75pp; English.

This is the amino acid sequence of a human nuclear protein (HEC) used in the method of the invention to diagnose cell growth abnormalities.

Fragments of HEC are used to detect HEC-encoding nucleic acid, in conventional immunoassays to detect HEC or peptides. HEC is used to modilate cell cycle progression (by disrupting chromatid separation) and antibodies are used to disorder sister chromatid alignment and separation in interphase cells, disrupting mitosis, particularly for control of malignancy and other cell growth abnormalities at the control of malignancy and other cell growth abnormalities at the control of malignancy and other cell growth abnormalities at the control of malignancy and other cell growth abnormalities at the sequences encoding HEC or related protein purification, to isolate sequences encoding HEC or related proteins; to study HEC immunisation.

Medical States and antibodies can also be used for protein purification.

Immunisation.

Immunisation.
                                           16-FEB-1999 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This protein comprises a novel human nuclear protein, designated
This protein comprises a novel human nuclear protein, designated
This protein comprises a novel human nuclear protein, designated
This protein comprises a novel human nuclear to be crucial for
normal mitosis. Its amino acid sequence was deduced from an
isolated B cell cDNA clone (see V38564). HEC localises to the
nuclei of interphase cells and redistributes to centromeres during
M phase. Ectopic expression of a mutant HEC containing only the
leucine heptad repeats results in cells being unable to divide more
than once. Inactivation of HEC results in disordered sister
conformatid alignment and separation, and formation of non-viable
cells with multiple, fragment micronuclei. HEC interacts through
its leucine heptad regions with several proteins involved in
itsels, including nek2, sbi.8 and 2 different regulatory subunits
of the 26s proteasome, MSSI and p45. These properties suggest
other to kinetochores, sister chromatic movement, and M phase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB; V38564.

Worlels and encoding human nuclear protein HEC modulating mitosis useful to, e.g control cell malignancies and other cell growth abnormalities at mitosis stage and to produce HEC protein and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          abnormalities at the cell mitosis stage. HEC peptides are useful in vaccines and may be administered to cells to disrupt chromatid separation and so modulate cell cycle progression (claimed). HEC specific antibodies are useful in purifying native or recombinant HEC and to detect HEC protein/peptides in samples (claimed immunodetection kits are provided). They can also be administered to disorder slater chromatid alignment and separation in an interphase cell, so disrupting mitosis (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       progression. Particularly and polypeptides are useful in compositions to control cell malignancies and other cell growth abnormalities at the cell mitosis stage. HEC peptides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ij
                                                                                                                                                                                                                                                                                         26-0CT-1998 (first entry)
Human nuclear protein HEC.
HEC gene; highly expressed in cancer; human; nuclear protein; mitosis; cell cycle; cell proliferation; malignancy; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5.6%; Score 94; DB 1; Length 642; 40.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5
                                                                                                                                                                                                                                                                                      2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     E. coll as a fusion to the Pasteurella haemolytica leukotoxin gene lktA coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. Somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lktA coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP504 and starts at the coden for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               102 KNLPQGAFDAFVSITFNVGCGKM-QKS-TLFKQANQGFTPQLCHQFERWIYAGGKKLNG 158

Claim 1; Fig 2: 119pp; English.
A genomic cosmid library of Haemophilus somnus HS25 DNA was screened for clones capable of binding bovine haemin and having haemolytic activity. Positive clones were subcloned various times, resulting in plasmid pRAPDOI, which binds haemin but is not haemolytic. The clone was sequenced and was found to contain several open reading frames, potentially encoding 8 proteins. The haemin binding protein (encoded by the hmb gene) was encoded by ORPI. The protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                104 KNLPQGAFDAFVSITFNVGCGKM-QKS-TLFKQANQGFTPQLCHQFERWIYAGGKKLNG 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 2; Page 17; 24pp; English.

Replacing Glu at position 126 of bovine somatotropin reduces hydrophobicity and helical stability in the region of the mutation. The analogue-bsy has a lower propensity of the partially denatured protein for aggregation and precipitation during processing. It also has enhanced bloactivity and can be used for enhancing the growth of an animal, e.g. beef cattle or increasing milk production in dairy cows. The mutation was introduced by standard site-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         residues 96 to 133 to reduce hydrophobicity or helical stability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Haemophilus somnus immunogenic proteins used in vaccines -

Replacing Lys at position 114 of bovine somatotropin reduces hydropholicity and helical stability in the region of the mutation. The analogue-bST has a lower propensity of the partially denatured protein for aggregation and precipitation during processing. It also has enhanced bloactivity and can be used for enhancing the growth of an animal, e.g. beef cattle or increasing milk production directed techniques.

Example 5; Page -; 28pp; English.

This sequence represents a variant of bovine growth hormone which alters the mature protein amino acid sequence represented in W37691. This variant is used in a method to detect growth hormone antagonists. Such disorders characterised by excessive or undesirable growth hormone activity, especially diabetic retinopathy, glomerulosclerosis or growth hormone-dependent tumours, and for lowering serum cholesterol levels. Note: This sequence does not appear in the specification but has been sequence 17 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4
                                                                                                                                                                                                                                                                                                /note= "Wild type Lys is replaced by Trp. Numbering is given from the start of the mature peptide."

             28-JAN-1999 (first entry)
Full length sequence of clone 1281865 corresponding to CS141 sequence.
EST sequence; CS141; gastrointestinal tract; cancer; Barret's esophagus; gastric ulcer; gastriis; leiomyoma; polyps; Crohn's disease; ulcerative colitis; pantreatitis; ss.
                                                                                                                                                                                                                                                                                                     pancratitis

Claim 1; Page 92; 116pp; English.

V63504.15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues.

The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, clasoring, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastrointestinal claract concers, crohn's disease, ulcerative collish, pantreatitis, lelomyoma, polyps, crohn's disease, ulcerative collish, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     640

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 15; Fig 4; 51pp; English. V16668-81 represent polynucleotide sequences of partial or full-length cDNA clones of colon-specific genes. The polynucleotides can be used as probes to detect expression of the corresponding human genes, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnostic assays for detecting micrometastases of colon cancer. Recombinant cells containing the polynucleotides can be used to produce the polypeptides, in order that antibodies can be raised and used in further screning or diagnostics. 173 G; 107 T; Sequence 548 BP; 137 A; 128 C; 173 G; 107 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Colon-specific nucleic acids - useful as probes for detecting colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    agacacaaacaaatacgagggatggccagagctgctggagatggagggctgcatgcccc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   colon cancer metastasis
(laim 1; Fig 4; 60pp; English.
13 cDNA clones (14580-92), most to them partial clones, correspond
14 cDNA clones (14580-92), most to them partial clones, correspond
15 cDNA clones (14580-92), most of them partial clones, correspond
16 cDNA clones (14580-92), most designated CSG1, CSG2, etc., that
18 are primarily expressed in tissues derived from the colon. CSG7
18 and CSG10 show reduced expression in colon cancer cells as compared
18 to that in normal cells; the remaining genes are overexpressed in
18 colon cancer. The partial CDNA sequences can be used to isolate
19 clones and genomic clones including the complete gene.
28 concleic acids can be used to produce CSG polypeptides (see also
28 concleic acids can be used to produce CSG polypeptides (see also
28 color cancer.

          Claim 1; represent a set of contiguous and partially overlapping Ensequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, barret's esophagus, gastric ulcer, gastriitis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Paulication 1: Page 90; 116pp; English.

V63504-15 represent a set of contiguous and partially overlapping E: agequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting,

The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, proponosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, crohn's disease, ulcerative collis, partreatitis, leiomyoma, polyps, crohn's disease, ulcerative collis, pantreatitis, leiomyoma, polyps, Sequence 228 BP; 63 A; 48 C; 68 G; 49 T;

Claim 1; Pages 89-90; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disorders. The methods and products can be used in detecting, disorders tracing, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastlitis, leiomyoma, polyps, Crohn's disease, ulcerative collitis, pantreatitis.

The property of contiguous and partially overlapping Expenses designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastricitis, leiomyoma, polyps, crohn's disease, ulcerative collis, partreatitis, leiomyoma, polyps, crohn's disease, ulcerative collis, partreatitis, leiomyoma, polyps, crohn's disease, ulcerative collis, partreatitis.

                                                                                                                                                                                                                                        Clone 775133 EST corresponding to CS141 sequence.
EST sequence; CS141; gastrointestinal tract; cancer; Barret's esophagus; gastric ulcer; gastritis; leiomyoma; polyps; Crohn's disease; ulcerative colitis; pantreatitis; ss.
                             182
                                                                  V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal trisques. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, barret's esophagus, gastric unicer, gastritis, leiomyoma, polyps, crohn's disease, ulcerative colitis, pantreatitis, leiomyoma, polyps, Sequence 273 BP; 49 A; 81 C; 90 G; 46 T;

(pharmacia), digested with Not I and cloned into the Not I
and ECO RI sites of the modified pTTT3 vector. Library
went through one round of normalization. Tissue samples
provided by Dr. Brian Dieckgraefe (Washington University
dieckfim.wustl.edu); colonic mucosa represents a range of
disease involvement from moderate to severe Crohn's
disease; samples include both perforating (fistulas) and
non-perforating samples. Library constructed by Bento
Soares and M. Fatima Bonaldo.

      double-stranded CDNA was ligated to ECO RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and ECO RI sites of the modified pT/T3 vector. Library went through one round of normalization. Tissue samples provided by Dr. Brian Dieckgraefe (Washington University, dieck@im.wustl.edu); colonic mucosa represents a range of disease involvement from mild cryptilis to severe disease involvement from mild cryptilis to severe dibrorsis, and degeneration. Library constructed by Bento Soares and M. Fatima Bonaldo. "

with a modified polylinker: 1st strand cDNA was prepared
from normal prostate bulk tissue, and was then primed with
a Not I: -oligo(dI) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified p1773 vector. Library is normalized, and was
constructed by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Jobes 1977 Parababac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pr773 vector. This library is the normalized version of NCI_CGAP_BRI.1. Library was constructed by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ж.

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaido. "

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pt773 vector. Library is not normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo (Soares4).
